COORDINATING COMMITTEE

MEMORANDUM BY THE UNITED STATES DELEGATION

CONCERNING

EXPORT OF TETRAFLUOROETHYLENE (TEFLON) INSULATING TAPE TO POLAND

In response to the questions raised by the French Delegation (COCOM Doc. 3407) concerning the export request contained in COCOM Document 3402, the United States Delegation has received the following information from its authorities:

- A. The technical name for Teflon is tetrafluoroethylene.
- B. The insulating tape in question is not a thin sheet but a narrow strip in the form of tape which should not be confused with dielectric film.
- C. The tape can maintain its electrical characteristics above 200 degrees Centigrade. It is used for insulation at high temperatures for wrapping electrical systems.
